

FORMATTING IN HTML

Block Text

Regular text

Lorem ipsum dolor sit amet, consetetur
 sadipscing elitr, sed diam nonumy eirmod tempor
 invidunt ut labore et dolore magna aliquyam erat,
 sed diam voluptua. At vero eos et accusam et
 justo duo dolores et ea rebum.

FORMATTING IN HTML

Code

Text with some `code` in it.

Lorem ipsum dolor sit amet, consetetur sadipscing
 invidunt ut labore et dolore magna aliquyam erat,
 At vero eos et accusam et justo duo dolores et ea

Using this kind of formatting won't automatically add line-breaks,
 so the text will overflow at the borders.

FORMATTING IN HTML

Custom CSS

This text here still uses the standard layout.

*Everything in this text block uses the .description layout from
 file examples/basics/cardsgen.css.*

And here is the standard layout again.

FORMATTING IN MARKDOWN

A Formatting Overview

Formatting can be done in Markdown. Or HTML. Or both mixed in the same file.

Pandoc (the tool used to convert the input to HTML and then PDF) supports some extensions to the standard Markdown format. An overview over Markdown formatting with pandoc can be found at <https://pandoc.org/MANUAL.html#pandocs-markdown>.

See the following cards for concrete examples.

Formatting can be done in Markdown. Or HTML. Or both mixed in the same file.

Pandoc (the tool used to convert the input to HTML and then PDF) supports some extensions to the standard Markdown format.

An overview over Markdown formatting with pandoc can be found at <https://pandoc.org/MANUAL.html#pandocs-markdown>.

See the following cards for concrete examples.

FORMATTING IN MARKDOWN

Block Text

Regular text

Lorem ipsum dolor sit amet, consetetur sadipscing elitr, sed diam nonumy eirmod tempor invidunt ut labore et dolore magna aliquyam erat, sed diam voluptua. At vero eos et accusam et justo duo dolores et ea rebum.

Regular text

```
> Lorem ipsum dolor sit amet, consetetur
    sadipscing elitr, sed diam nonumy
    eirmod tempor
> invidunt ut labore et dolore magna aliquyam
    erat, sed diam voluptua.
> At vero eos et accusam et justo duo dolores et
    ea rebum.
```

FORMATTING IN MARKDOWN

Code

Text with some code in it.

Lorem ipsum dolor sit amet, consetetur sadipscing invidunt ut labore et dolore magna aliquyam erat, At vero eos et accusam et justo duo dolores et ea

Using this kind of formatting won't automatically add line-breaks, so the text will overflow at the borders.

Text with `some code` in it.

```
...
Lorem ipsum dolor sit amet, consetetur
    sadipscing elitr, sed diam nonumy
    eirmod tempor
invidunt ut labore et dolore magna aliquyam
    erat, sed diam voluptua.
At vero eos et accusam et justo duo dolores et
    ea rebum.
...
```

Using this kind of formatting won't automatically add line-breaks, so the text will overflow at the borders.

FORMATTING IN MARKDOWN

Columns

This is some standard text without further formatting. It uses the whole line. But the following text will consist of 2/3 text on the left side vs 1/3 table on the right side.

This text uses the first 2/3 of the whole width. The last 1/3 is used by the table.

A	B
7	5

This is some standard text without further formatting. It uses the whole line. But the following text will consist of 2/3 text on the left side vs 1/3 table on the right side.

```
::: {.columns}
<!-- The following block is 2 elements wide -->
::: {.col-2}
This text uses the first 2/3 of the whole width.
The last 1/3 is used by the table.
:::
<!-- This block is only 1 element wide -->
::: {.col-1}
| A      | B      |
| :---:  | :---:  |
| 7      | 5      |
| -123   | 14     |
:::
<!-- The following line ends the {.columns} -->
:::
```

FORMATTING IN MARKDOWN

Conditional Directive

Use {if:key}...{endif} to show a block only when a key is present and non-empty. Add {else} for an alternative branch. Use {if:key=value} to check for a specific value. See the *Input* category for a working example.

Presence check — show a block only when the key exists:

```
{if:note}
> Note: {note}
{endif}
```

Value check with else — choose between two branches:

```
{if:difficulty=hard}
Difficulty: Hard
{else}
Difficulty: Normal
{endif}
```

FORMATTING IN MARKDOWN

Custom CSS

This text here still uses the standard layout.

Everything in this text block uses the .description layout from file examples/basics/cardsgen.css.

And here is the standard layout again.

This text here still uses the standard layout.

```
::: {.description}
Everything in this text block uses the
`description` layout from file
`examples/basics/cardsgen.css`.
:::
```

And here is the standard layout again.

FORMATTING IN MARKDOWN

Include Directive

Place `{include:path/to/fragment.md}` in a `_template.md` to embed a shared file at that position. The path is relative to the template's own directory.

Included files are expanded recursively, so an included file may itself use further `{include:}` directives and `{key}` placeholders.

See the *Input* category for a working example.

```
Template _template.md:

# {name}

{description}

{include:_footer.md}

Fragment _footer.md:

---
*Shared content appearing on every card.*
```

Mixed Markdown and HTML

This is a file formatted using Markdown and HTML.

Just *adding* **some** text.

Lorem ipsum dolor sit amet, consetetur sadipscing elitr, sed diam nonumy eirmod tempor invidunt ut labore et dolore magna aliquyam erat, sed diam voluptua. At vero eos et accusam et justo duo dolores et ea rebum.

Single HTML file

This is a file formatted using HTML.

Just *adding* **some** text.

Lorem ipsum dolor sit amet, consetetur sadipscing elitr, sed diam nonumy eirmod tempor invidunt ut labore et dolore magna aliquyam erat, sed diam voluptua. At vero eos et accusam et justo duo dolores et ea rebum.

Single Markdown File

This is a file formatted using Markdown.

Just *adding* **some** text.

Lorem ipsum dolor sit amet, consetetur sadipscing elitr, sed diam nonumy eirmod tempor invidunt ut labore et dolore magna aliquyam erat, sed diam voluptua. At vero eos et accusam et justo duo dolores et ea rebum.

CSV Multiple Item Example 1

An HTML template has been used to create this card for a CSV Multiple Item Example 1.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 1
size	123

This entry can span over multiple lines if you add line breaks manually.

CSV Multiple Item Example 1

An HTML template has been used to create this card for a CSV Multiple Item Example 1.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 1
size	123

This entry can span over multiple lines if you add line breaks manually.

CSV Multiple Item Example 2

An HTML template has been used to create this card for a CSV Multiple Item Example 2.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 2
size	456

This entry can span over multiple lines if you add line breaks manually.

CSV Multiple Item Example 2

An HTML template has been used to create this card for a CSV Multiple Item Example 2.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 2
size	456

This entry can span over multiple lines if you add line breaks manually.

Text Single Item Example

An HTML template has been used to create this card for a Text Single Item Example.

Some data for this item:

Key	Value
name	Text Single Item Example
size	123

This entry can span over multiple lines until a new line is reached that starts with <key>: . . .

INPUT · template_html

Yaml Multiple Items Example 1

An HTML template has been used to create this card for a Yaml Multiple Items Example 1.

Some data for this item:

Key	Value
name	Yaml Multiple Items Example 1
size	123

This entry can span
over multiple
lines using the Yaml literal block scalar.

INPUT · template_html

Yaml Multiple Items Example 2

An HTML template has been used to create this card for a Yaml Multiple Items Example 2.

Some data for this item:

Key	Value
name	Yaml Multiple Items Example 2
size	456

This entry can also span.

INPUT · template_html

Yaml Single Item Example

An HTML template has been used to create this card for a Yaml Single Item Example.

Some data for this item:

Key	Value
name	Yaml Single Item Example
size	123

This entry can span
over multiple
lines using the Yaml literal block scalar.

INPUT · template_markdown

CSV Multiple Item Example 1

A markdown template has been used to create this card for a CSV Multiple Item Example 1.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 1
size	123

This entry can span over multiple
lines if you add line breaks manually.

INPUT · template_markdown

CSV Multiple Item Example 1

A markdown template has been used to create this card for a CSV Multiple Item Example 1.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 1
size	123

This entry can span over multiple
lines if you add line breaks manually.

INPUT · template_markdown

CSV Multiple Item Example 2

A markdown template has been used to create this card for a CSV Multiple Item Example 2.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 2
size	456

This entry can span over multiple
lines if you add line breaks manually.

INPUT · template_markdown

CSV Multiple Item Example 2

A markdown template has been used to create this card for a CSV Multiple Item Example 2.

Some data for this item:

Key	Value
name	CSV Multiple Item Example 2
size	456

This entry can span over multiple
lines if you add line breaks manually.

INPUT · template_markdown

Text Single Item Example

A markdown template has been used to create this card for a Text Single Item Example.

Some data for this item:

Key	Value
name	Text Single Item Example
size	123

This entry can span
over multiple
lines until a new line is reached that starts with <key>: . . .

Yaml Multiple Items Example 1

A markdown template has been used to create this card for a Yaml Multiple Items Example 1.

Some data for this item:

Key	Value
name	Yaml Multiple Items Example 1
size	123

This entry can span over multiple lines using the Yaml literal block scalar.

Yaml Multiple Items Example 2

A markdown template has been used to create this card for a Yaml Multiple Items Example 2.

Some data for this item:

Key	Value
name	Yaml Multiple Items Example 2
size	456

This entry can also span.

Yaml Single Item Example

A markdown template has been used to create this card for a Yaml Single Item Example.

Some data for this item:

Key	Value
name	Yaml Single Item Example
size	123

This entry can span over multiple lines using the Yaml literal block scalar.

Card With Note and Hard Difficulty

This card has an optional note field and difficulty=hard. Both conditional blocks show their then-branch.

Note: This detail only appears when the note key is present.

Difficulty: Hard

Card Without Note, Hard Difficulty

This card has difficulty=hard but no note. The note block is skipped; the hard-difficulty branch is shown.

Difficulty: Hard

Card Without Note, Normal Difficulty

This card has no note field and no difficulty key. The note block is skipped; the difficulty else-branch is shown.

Difficulty: Normal

Include Example 1

The footer below comes from a shared _footer.md fragment. It appears identically on every card in this group.

Shared via {include:_footer.md} — use { to show a literal { on the card.

Include Example 2

Same template, different data — but the included footer is still the same file on disk.

Shared via {include:_footer.md} — use { to show a literal { on the card.
